Fish Eye Inspections uses a micro ROV to conduct video inspections of all things underwater. Whether you have a water tower to a lake or river intake. Fish Eye Inspections can do the “dive” with minimal safety risk and chance of contamination.

Because we use a ROV, our dive crew is very small. Most jobs require just the operator. Due to some logistics such as water towers, a crew of two may be required. And because we have such a small crew, our costs are very inexpensive when compared to a full commercial dive crew.

Fish Eye Inspections parent company (1297867 Alberta Ltd) is a fully insured privately owned company. We are a member of the Alberta Association of Safety Partnerships. We have a current SECOR and are a member of Complyworks.
